

CIS Research Assistantships Available

School of Computer and Information Systems

Researchers in the Mobile Applications and Services Laboratory investigate how emerging mobile technologies and pervasive network services can be used to enhance the lives of real people and the communities within which they work, play, and socialize.

The MASL Lab is offering Research Assistantships for the Fall 09 semester. These positions involve designing, implementing and deploying mobile applications and services on the latest mobile platforms (iPhone and Android) as well as Google App Engine and other server side technologies. Graduate students who have strong problem solving abilities and demonstrated programming skills, are effective communicators, and thrive on the challenges of rapidly assimilating new platforms and technologies while applying them to real problems are encouraged to apply. Prior mobile development experience is considered a plus but is not required. Students can apply for the positions by emailing their resume and a faculty reference to Prof. Jonathan Engelsma (Jonathan.Engelsma@gvsu.edu).
